

28 CHANNEL INK JET DRIVER

ADVANCE DATA

- 40V DMOS OUTPUT BREAKDOWN
- TWO DECODER OPTIONS ARE INCLUDED
- PRECISE OUTPUT ENERGY
- ESD OUTPUT PROTECTION WITH CLAMPING DIODES
- VERY LOW QUIESCENT CURRENT
- PLCC44 OR PQFP44 (10 x 10mm)

DESCRIPTION

The L6450 is realized in Multipower BCD Technology which combines isolated DMOS power transistors with CMOS and Bipolar circuits on the same IC. By using mixed technology it has been possible to optimize the logic circuitry and the power stage to achieve the best possible performances.

Intended to be used in ink jet Printer Applications as 4 to 28 (2 x 14) or 3 to 28 (4 x 7) lines selectable decoder/driver, the L6450 device driver has the advantages of low power CMOS inputs and logic, with 28 high current and high voltage DMOS outputs capable of sustaining a maximum of 40V.

On system power up the output drivers are locked out using the chip enable function; four enable in-

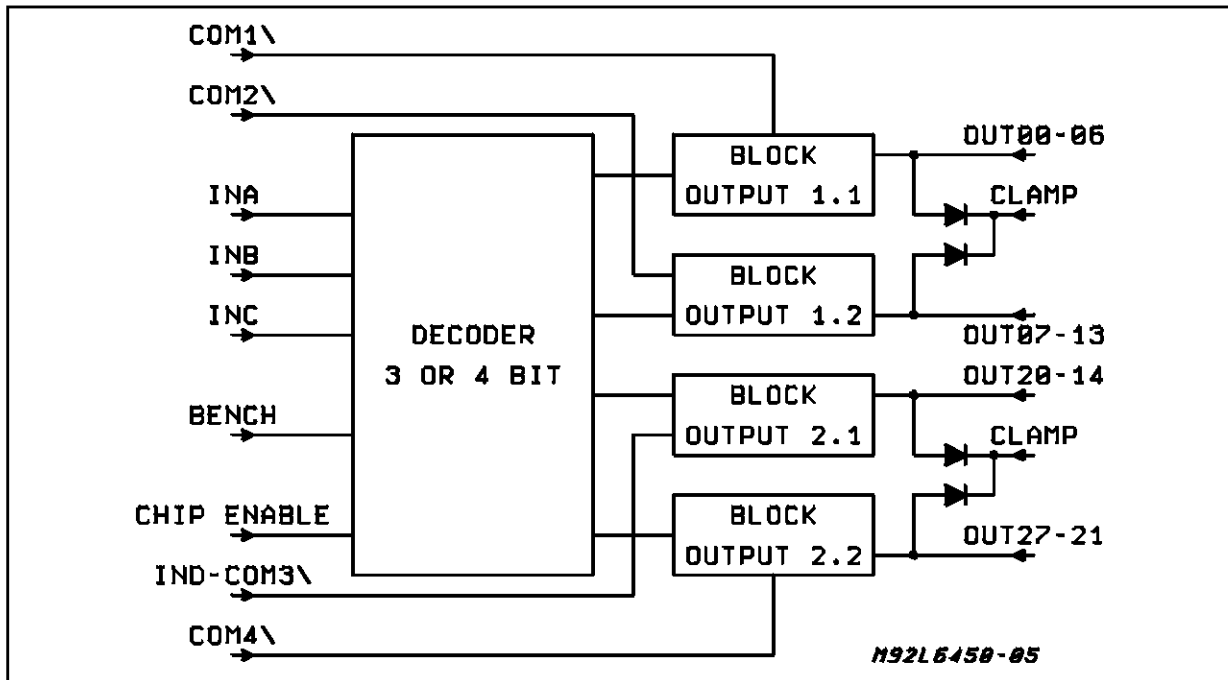

puts are available for the different driver banks. An internal power-on system is implemented in order to avoid wrong output commutation during the supply voltage transients. Using a mask option during manufacturing allows a different decoding. Control of the energy delivered to the print head is made by means of a special circuitry. All driver outputs are capable of withstanding a contact discharge of $\pm 8\text{KV}$ with the IC biased.

PIN FUNCTIONS

Name	Function
V _{DD}	5V Logic Supply.
GND	Logic and Power Ground.
OUT0 to OUT27	DMOS Outputs.
CLAMP	This pins have to be connected to the power supply voltage of the head resistors, each of the output DMOS have their drain connected with the anode of a protection diode, all the catodes of the protection diodes are collected to the pins clamp. If the CLAMP pins are not connected to the power, the device is not supplied.
INA, INB, INC, IND	Decoder inputs. The input IND shares the pin with the other input $\overline{\text{COM3}}$, the two different functions are selected by the pin bench.
$\overline{\text{COM1}}$, $\overline{\text{COM2}}$, $\overline{\text{COM3}}$, $\overline{\text{COM4}}$	A low logic input on this pins enable the outputs selected by the decoder inputs according to the logic level of the pin bench. The input COM3 shares the pin with the other input IND, the two different functions are selected by the pin Bench.
CHIP ENABLE	A logic high enable the chip.

OUTPUT SELECTION

1) Decoder Truth Table when the BENCH = HIGH;
 IND/COM3 = is selected as input decoder ind;
 COM1 = a low input enable the OUT0 to OUT13;
 COM2 = A Low Input Enable the OUT14 to OUT27

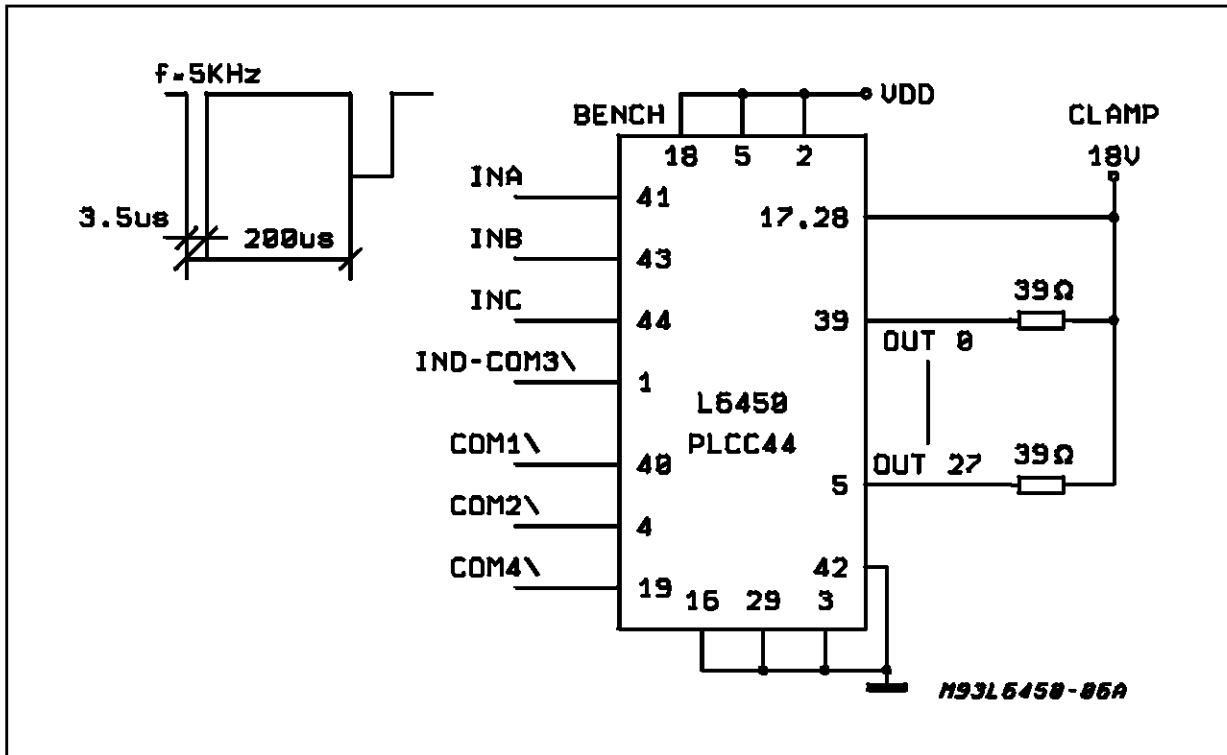

IND	INC	INB	INA (LSB)	OUTPUTS
0	0	0	0	0.27
0	0	0	1	1.26
0	0	1	0	2.25
0	0	1	1	3.24
0	1	0	0	4.23
0	1	0	1	5.22
0	1	1	0	6.21
0	1	1	1	7.20
1	0	0	0	8.19
1	0	0	1	9.18
1	0	1	0	10.17
1	0	1	1	11.16
1	1	0	0	12.15
1	1	0	1	13.14
1	1	1	0	ALL OFF
1	1	1	1	ALL OFF

2) Decoder Truth Table when the BENCH = LOW;
 IND/COM3 = is selected as COM3
 COM1: A Low Input Enable the OUT0 to OUT6
 COM2: A Low Input Enable the OUT7 to OUT13
 COM3: A Low Input Enable the OUT14 to OUT20
 COM4: A Low Input Enable the OUT21 to OUT27

INC	INB	INA (LSB)	OUTPUTS
0	0	0	0, 7, 27, 20
0	0	1	1, 8, 26, 19
0	1	0	2, 9, 25, 18
0	1	1	3, 10, 24, 17
1	0	0	4, 11, 23, 16
1	0	1	5, 12, 22, 15
1	1	0	6, 13, 21, 14
1	1	1	ALL OFF
